Python Advanced (Selenium)

Lab 1

◆ Objective

The objective of this assignment is to use Selenium with Python to scrape real job listings from a live job portal and store the extracted data in a structured CSV file.

You will work with the following website: Naukrigulf

◆ Task Description

Develop a Selenium script that collects all job listings related to “Data Engineer” from the first three pages of search results.
Your script must navigate dynamically through the pages and extract detailed job information.

◆ Data to Be Extracted

For every job listing found on pages 1, 2, and 3, extract the following information:

- ✧ Job Title
- ✧ Company Name
- ✧ Job Location
- ✧ Required Experience
- ✧ Full Job Description

◆ Submission

Export the output to a CSV file. You need to upload both the Python code and the CSV file
